What is a Project and Project Management?

■ «A project is a temporary endeavor undertaken to create a unique product, service, or result.»

■ «Project Management is the application of knowledge, skills, tools & techniques to project activities **to meet project**

- 1) Business As Usual (BAU)
Day to day operations (Banking, retail, production lines)
(BAU = Stability)
- 2) Changes (projects)
(New products, process reengineering)
Every Change is a PROJECT

Relationships between Project, Programs and Portfolio

Theofanis.Giotis@12pm.biz (BA, MSc, Ph.D. C., PMP, PMI-ACP, CSM/CSP, PRINCE2 Practitioner/Trainer)

■ Portfolio Management

■ “A portfolio refers to projects, programs, sub portfolios and operations managed as a group to achieve strategic objectives.”

■ Program Management

■ “A program is a group of related projects managed in a coordinated way to obtain benefits and control not available from managing them individually”

Project Name:		(page 4)
Prepared by:		
Date:		
Initiation:	Includes the name of the project and the designated project manager	
Synopsis:	Briefly summarize the salient aspects of the project by answering the questions "Why?" (purpose), "What?" (product description/scope), "When?" (time), and "How much?" (resources)	
Purpose/Business Need:	Identify the customers who are to receive and benefit from the product developed by the project and the need the product is intended to meet (either as a problem to solve or as an opportunity to exploit)	
Product Description and Deliverables:	Identify what product is to be delivered at the end of the project, and at any interim delivery points. Describe the product sufficiently to enable the project team to create it, and for agreement to be reached at product delivery time that the product has been correctly produced	
Project Management:	Briefly indicate general approach and any relevant PMI or other standards to be used	
Assumptions, Constraints, Risks:	Briefly identify salient assumptions, constraints, and known risks, if any, which can be anticipated to have a major impact on the process and/or outcome of the project and which require decisions or actions by the project sponsor or team	
Resources:	Indicate required and/or available resources to be used on the project. As appropriate, indicate financial, personnel, and material resources (such as facilities, equipment, supplies, and services)	
Approach:	Indicate the way in which the project will produce the product	
Communication and Reporting:	Identify communication required between the project sponsor and the project team	
Acceptance:	Indicate the method and criteria for the project sponsor to accept the specified project deliverables as complete and adequate	
Change Management:	Indicate the procedures to be used for making and documenting changes to the charter	
Other:		
Approval (optional):	Sponsor and Project Manager

How can you reduce the duration of your project by 1 month?

Can you reduce the duration of your project by 2 months?

4 ways to reduce the project duration

Option	General Impacts on the Project
Fast track	<ul style="list-style-type: none"> Adds risk (doing things in parallel, lead time) May add management time for the project manager
Crash (cash)	<ul style="list-style-type: none"> Almost always adds cost May add management time for the project manager
Reduce scope	<ul style="list-style-type: none"> Could save cost and time May negatively impact customer satisfaction
Cut quality	<ul style="list-style-type: none"> Could save cost and resources May increase risk Requires good metrics

Project Quality Management

Definition of quality

Joseph Juran:

“Fitness for use” (fitness is defined by the customer)

Philip Crosby:

“Conformance to requirements” and “Zero Defects”

REQUIREMENTS???

Quantitative	Qualitative
• Objective	• Subjective
• Functional	• Non-Functional
• Everyone understands the same	• Everyone understands different things
• Specifications/Specs	• Wishful thinking...
• Door 200 x 100 x 5cm	• Sound/water proof...
• Black color	• Good design...

Quality Metrics

Convert quality requirements to quality metrics

Quality Requirement	Quality Metric	(page 10)
Fast Computer:	10,000,000 calculations per second.	
Good Event:	On a scale 1 to 10, evaluations must be > 8.0.	
Good Report:	TOC, Index, 10 Chapters, 50 pictures, hard cover, <20 words per sentence, etc.	
Resilient design:	Not to break if falls from 80cm.	
Good leaflet:	If exposed to sun, colors should not change.

Categories of costs:

- **Variable Costs** These costs change with the amount of production or the amount of work. Examples include the cost of material, supplies, and wages.
- **Fixed Costs** These costs do not change as production changes. Examples: set-up cost, rent, utilities, etc.
- **Direct Costs** These costs are directly attributable to the work on the project. Examples are **team travel, team wages, recognition, and costs of material used on the project.**
- **Indirect Costs** Indirect costs are overhead items or costs incurred for the benefit of more than one project. Examples include **taxes, fringe benefits, and janitorial services.**
